Abstracts

Salted duck eggs and preserved duck eggs, also known as 'century eggs', were originally developed in China centuries ago to extend the shelf life of duck eggs in the absence of refrigeration. These egg products are still widely consumed today, especially in Asia, and are key ingredients in a variety of East and South-East Asian dishes. Worldwide production of shell eggs from ducks and geese have seen a 32% increase since 2002, exceeding 87 billion in 2012, with 94% of production concentrated in Asia. The growing Asian population in North America may be a market opportunity for local producers and processors to substitute local for imported ethnic foods. In previous studies on the potential in regional consumer markets for locally produced ethnic Asian foods, it was found that immigrants are open to buying locally produced food and will even pay a premium for it. In the salted and preserved duck egg categories, imports dominate the North American market. Yet there have been several food safety and quality assurance issues associated with these imported goods, including lead contamination in preserved duck eggs, and prohibited Sudan red dye in salted duck eggs.
