Abstracts

This report mainly focus on Centrifugal Compressors used for process gas market. Process Gas Compressor is mechanical device that increases the pressure of process gas such as argon, ethylene, fluorine, helium, hydrogen, oxygen, neon, silane, TFE, xenon and other gases, by reducing its volume. This report does not cover compressors for air and nitrogen. Centrifugal compressors, sometimes called radial compressors, are a sub-class of dynamic axisymmetric work-absorbing turbomachinery.

Centrifugal compressor achieve a pressure rise by adding kinetic energy/velocity to a continuous flow of fluid through the rotor or impeller. This kinetic energy is then converted to an increase in potential energy/static pressure by slowing the flow through a diffuser. The pressure rise in the impeller is in most cases almost equal to the rise in the diffuser.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
