Abstracts

This report mainly focus on Screw Compressors used for process gas market. Process Gas Compressor is mechanical device that increases the pressure of process gas such as argon, ethylene, fluorine, helium, hydrogen, oxygen, neon, silane, TFE, xenon and other gases, by reducing its volume. This report does not cover compressors for air and nitrogen.

Compressors are similar to pumps: both increase the pressure on a fluid and both can transport the fluid through a pipe. As gases are compressible, the compressor also reduces the volume of a gas.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Process Gas Screw Compressors market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
