Procurement as a service is an outsourced procurement model that combines technology, staff, and expertise to handle a portion, if not all, of your organization's procurement function. Technology helps them see what you're spending money on, and where you will likely be able to find savings. It helps them choose the categories for sourcing and assign category experts to handle purchasing for those categories. It relies on technology to do the sourcing and procurement, track purchases and payments and handles three-way matching to make sure you're only paying for what you get, and that you get the everything you're supposed to when you're supposed to.
