Proteomics is the study of the structure and functions of proteins that are used in drug discovery, diagnosis, and treatment of diseases. A proteome is never constant as it differs from one cell to other with time. Proteomics is used to evaluate the rate of protein production, interaction of proteins with one another, involvement of proteins in metabolic pathways, and modification of proteins. Structural proteomics is used to identify the structure of protein complexes, while functional proteomics is used for characterizing the protein? protein interactions to demonstrate protein functions. In this report, the proteomics market is segmented by instrument, reagent, and services & software. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Proteomics market in 2020.
