Abstracts

Human EGF is a 6-kDa protein with 53 amino acid residues and three intramolecular disulfide bonds. EGF binds to the epidermal growth factor receptor. Initially, human EGF was known as urogastrone.

This report studies the Recombinant Human EGF (Epidermal Growth Factor) obtained by recombinant protein.

EGF acts by binding with high affinity to epidermal growth factor receptor (EGFR) on the cell surface.

This stimulates ligand-induced dimerization, activating the intrinsic protein-tyrosine kinase activity of the receptor.

The tyrosine kinase activity, in turn, initiates a signal transduction cascade that results in a variety of biochemical changes within the cell – a rise in intracellular calcium levels, increased glycolysis and protein synthesis, and increases in the expression of certain genes including the gene for EGFR – that ultimately lead to DNA synthesis and cell proliferation.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Recombinant Human EGF market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among

the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Recombinant Human EGF industry.

Based on our recent survey, we have several different scenarios about the Recombinant Human EGF YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ xx million in 2019. The market size of Recombinant Human EGF will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.

With industry-standard accuracy in analysis and high data integrity, the report makes a brilliant attempt to unveil key opportunities available in the global Recombinant Human EGF market to help players in achieving a strong market position. Buyers of the report can access verified and reliable market forecasts, including those for the overall size of the global Recombinant Human EGF market in terms of revenue.

Players, stakeholders, and other participants in the global Recombinant Human EGF market will be able to gain the upper hand as they use the report as a powerful resource. For this version of the report, the segmental analysis focuses on revenue and forecast by each application segment in terms of revenue and forecast by each type segment in terms of revenue for the period 2015-2026.

Regional and Country-level Analysis

The report offers an exhaustive geographical analysis of the global Recombinant Human EGF market, covering important regions, viz, North America, Europe, China, Japan, Southeast Asia, India and Central & South America. It also covers key countries (regions), viz, U.S., Canada, Germany, France, U.K., Italy, Russia, China, Japan, South Korea, India, Australia, Taiwan, Indonesia, Thailand, Malaysia, Philippines, Vietnam, Mexico, Brazil, Turkey, Saudi Arabia, U.A.E, etc.

The report includes country-wise and region-wise market size for the period 2015-2026. It also includes market size and forecast by each application segment in terms of revenue for the period 2015-2026.

Competition Analysis

In the competitive analysis section of the report, leading as well as prominent players of the global Recombinant Human EGF market are broadly studied on the basis of key factors. The report offers comprehensive analysis and accurate statistics on revenue by the player for the period 2015-2020. It also offers detailed analysis supported by reliable statistics on price and revenue (global level) by player for the period 2015-2020.

On the whole, the report proves to be an effective tool that players can use to gain a

competitive edge over their competitors and ensure lasting success in the global Recombinant Human EGF market. All of the findings, data, and information provided in the report are validated and revalidated with the help of trustworthy sources. The analysts who have authored the report took a unique and industry-best research and analysis approach for an in-depth study of the global Recombinant Human EGF market. The following players are covered in this report:

FUJIFILM Irvine Scientific

PeproTech, Inc

R&D Systems (Bio-Techne)

Miltenyi Biotec

Thermo Fisher Scientific

Abcam PLC

BioLegend Way

STEMCELL Technologies

Eurofins DiscoverX

RayBiotech, Inc

Prospec-Tany

Tonbo Biosciences

Enquire Bio

ScienCell Research Laboratories

BioVision, Inc

Abm Inc

Cell Guidance Systems

Creative BioMart

Sino Biological

Cell Sciences

Axol Bioscience
