## **Abstracts**

For almost 50 years, the fractionation of human plasma has been the sole possible source of a wide range of therapeutic proteins--such as coagulation factors, anticoagulants, immunoglobulins, and albumin--essential to the treatment of serious congenital or acquired bleeding or immunological diseases. In the last 20 years, the application of recombinant technologies to mammalian cell cultures has made possible--although with some limitations in productivity, costs, and immunogenic risks--Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Recombinant Plasma Proteins market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
