## **Abstracts**

Reservoir is a subsurface pool of hydrocarbons which is present in porous or fractured rock formations, which could be conventional and unconventional. Conventional reservoir hydrocarbons, such as oil and gas, that are confined by rock formations that overlying and are easily traced by well drilling, whereas unconventional reservoir hydrocarbons are composed inside rocks and have low permeability, and thus require superior operation plan to recover. Some of the optimum examples for unconventional reservoirs are oil sand, gas hydrate deposit, tight gas sand, bitumen, and heavy hydrocarbon.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Reservoir Analysis market in 2020.
