RF monitor software is a software which (with special hardware as a WiFi-card) is able to detect signal strength and bit error rate of wireless networks. The software includes network discovery software programs as Kismet and Network stumbler, yet these latter provide much more information about the network itself, and are not as precise as true RF monitor software. The extra precision is especially useful in cooperation with a directional antenna.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the RF Software market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the RF Software industry.
