## **Abstracts**

Robotic process automation is an application technology where software with capabilities of artificial intelligence and machine learning are used for handling high volume, repeatable tasks. RPA allows employees to configure and program a computer software or a robot to interpret exiting application in the organization for manipulating data, processing transactions and communicating with digital systems.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Robotic Process Automation in Energy and Utility market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
