## Abstracts

Safety Spray Shields are used to prevent injury to personnel or damage to equipment in the event of a leak or spray-out of acids, caustics, chlorine, and other dangerous liquids at piping connections (such as flanges, valves, or expansion joints) found in chemical, pulp/paper, petrochemical and wastewater treatment plants.

These Safety Shields are commonly referred to as Pipe safety shields, flange guards, flange covers, flange diapers, or flange protectors.

Safety Spray Shields are designed to prevent and reduce catastrophic damage and injury to workers, property, and equipment by temporarily containing hazardous leaks and sprays. Early leak detection helps reduce maintenance costs in plants by preventing downtime from failures or recordable accidents. They help to minimise accidents on plant preventing costly plant down time, unplanned absenteeism, HSE investigations etc.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
