## **Abstracts**

Salmon farming is a type of aquaculture where the fish are grown in net cages, typically located in sheltered bays and fjords along the coast. Salmon are hatched in brood hatcheries and grown in freshwater until they are large enough to transfer to marine pens.

Fish, particularly farmed salmon, can offer one solution to meeting protein increased demand. As demand increases there will no doubt be increased pressure on the already over-exploited wild fish reserves, which is why farmed fish is required to efficiently manage and maintain both wild fish stocks and the ocean's natural biodiversity. It is important that the farmed salmon industry ensures sustainability is at the core of their operations if they are to meet this demand in a sustainable manner.
