Satellite internet is an internet connection that uses satellite signals to send and receive data. Using geostationary (fixed position) satellites, providers can offer a reliable internet connection to nearly anywhere.

Modern satellite dishes used for satellite internet are capable of sending and receiving data. This means you can use a satellite internet connection for downloading, streaming and uploading. In addition to a fixed satellite dish, satellite internet requires a modem and a router for home Wi-Fi service.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Satellite Internet market in 2020.
