Abstracts

A Signal Conditioner is a device that converts one type of electrical signal into another type of signal. In most cases, this is meant to take a signal that is difficult to read and convert it into one that is more easily readable by most types of instrumentation. Common signal inputs accepted by signal conditioners include AC current and AC voltage, DC current and DC voltage, frequency, process, strain gauge, temperature and more. Whatever inputs or outputs are required;

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
