## Abstracts

SNP genotyping is the measurement of genetic variations of single nucleotide polymorphisms (SNPs) between members of a species.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Single Nucleotide Polymorphism (SNP) Genotyping and Analysis market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
