Abstracts

The slicer also called slicing software acts as the middleman between the 3D model and the 3D printer. Once the object that has modeled would like to 3D print, it will be in an STL file. The slicer converts the model into a series of thin layers and produces a G-code file containing instructions tailored to a specific type of printer. In other words, it is dividing the object into a stack of flat layers and describing these layers as linear movements of the 3D printer extruder, fixation laser or equivalent.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
