Abstracts

In an integrated circuit manufacturing process, spin-on-carbon (SOC) materials constitute an important layer for the multilayer process to achieve smaller feature size. The SOC layer responds to the photolithography, pattern transformation, substrate planarization, and a variety of other critical processes. This report studies the SOC hardmasks. SOC hardmasks are an increasingly key component of the microchip fabrication process. They are frequently used to improve the resists' selectivity to silicon during plasma etching, and as chip architectures become more complex the use of hardmasks to improve the aspect ratio of features in silicon is critical.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the SOC (Spin on Carbon) Hardmasks market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
