### **Abstracts**

Solar concentrators utilize optical devices which absorb a large area of sunlight. They function on the idea of focusing a bundle of sunlight on a small area with the assistance of a mirror or optical equipment. In order to ensure that the solar concentrator works efficiently, they have to be placed in such a manner that it directly faces the sun. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Solar Concentrators market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Solar Concentrators industry.
