Abstracts

A spectroscopy camera is a camera that is used as a detection device in a spectrometer. Spectrometers are used in chemistry, the pharmaceutical industry, the food and beverage industry, and manufacturing to analyze samples, either for identifying or measuring product quality. As samples go through the spectrometer, they create a unique spectrum that is captured by the spectroscopy camera. The spectroscopy camera can be used with many types of spectroscopy, including fluorescence, Raman, and absorption/reflection.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Spectroscopy Cameras market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
