Abstracts

Spinal motion preservation devices are primarily used to treat various disorders related to spine. Spinal motion preservation devices are used to straighten vertebral, stabilize the motion of body, fixes multiple spinal segment and maintain the curvature of spine. The primary objectives of the spinal motion preservation devices are to maintain flexibility and retain specific motion. There are numerous techniques such as disc arthroplasty and laminoplasty that are associated in preserving the range of motion in the treated spine. The various problems in aged population are spinal stenosis, enlargement of bone and joints and thickening of tissues.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
