## Abstracts

Spiral wound membranes are tightly packed filter media where a permeable membrane is wrapped around a center core in a spiral fashion similar to a roll of fabric. The permeable membrane is sealed at the edges and is gapped with a spacer material that allows flow of the liquid that is to be filtered.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Spiral Wound Membranes market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
