Abstracts

Stereoscopic microscopes, also known as 'solid microscopes' or 'dissection mirrors,' produce an erect three-dimensional image when viewed. The stereoscopic effect is strong, the image is clear and wide, and it has a long working distance, and is a conventional microscope with a wide range of applications. Easy to operate, intuitive, and high in verification efficiency, suitable for inspection of electronic industry production lines, verification of printed circuit boards, verification of soldering defects (printing misalignment, sag, etc.) in printed circuit components, verification of single board PC, vacuum fluorescence Verification of the display VFD, etc., with measurement software can measure various data.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
