## Abstracts

Submersible Agitator generally consists of a heavy-duty submersible gearbox with a top mounted submersible electrical motor. This gearbox is mounted on a support structure that allows the unit to stand on the floor. On to the outgoing shaft of the Gearbox, a conical shaped impeller equipped with mixing flaps.

Submersible agitator generates greater impact flows. Submersible Agitators are usually used for the processing of livestock slurry, biogas, and civil/industrial effluents. Unlike dry-fitted motors, submersible agitators are highly flexible in terms of position, and can easily be redirected to ensure that the generated flow covers a large distance and adapts to the shape of the slurry pit.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
