Sulfur Dioxide, is a colorless gas with a strong odor. Sulfur dioxide is not combustible but it is considered an extremely toxic gas. When combined with water, sulfur dioxide becomes sulfuric acid which is highly corrosive and cause chemical burns. It is important to monitor sulfur dioxide levels for two main reasons: because industrial buildings such as power plants emit large amounts of sulfur dioxide and sulfur dioxide is a highly reactive gas.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Sulfur Dioxide Gas Sensors market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
