## Abstracts

Surgical stainless steel is a grade of stainless steel used in biomedical applications. The most common 'surgical steels' are austenitic SAE 316 stainless and martensitic SAE 440, SAE 420, and 17-4 stainless steels. There is no formal definition on what constitutes a 'surgical stainless steel', so product manufacturers and distributors often apply the term to refer to any grade of corrosion resistant steel.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Surgical Stainless Steel market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
