## Abstracts

Lace wigs are the type of wig in which synthetic hair or human hair is tied to a sheer lace base, which covers the scalp. There are the two major types of lace wigs available in the global market, including lace front wigs and full lace wigs. Lace front wigs have lace at the forehead which extend from ear to ear. This type of wigs provide an illusion of the natural hair line in the front. As the lace is only present in the front half of the wig, thus the wig allows the wearer to part hair, on any side. Further, lace front wigs are gaining popularity around the world as they provide more realistic appearance, offers versatility of hair parting and are more comfortable to wear, when compared with the full lace wigs.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Synthetic Lace Front Wigs market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
