Abstracts

Binders are polymeric materials, which are increasingly being employed in the textile industry in order to form a film and increase the affinity of pigments on textile materials. Pigment particles are usually bonded on to the surface of a fabric. Binders help in forming a polymeric coating over the fabric in order to stick pigment particles together. Thus, textile binder plays an important role at the time of pigment dyeing and printing. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
