## Abstracts

Thermal spray is a group of industrial processes that generally include the propelling of micrometer-sized particles of molten or semi-molten materials in order to create a protective or decorative coating on the surface of the desired substrate. The thermal spray coating provides various advantages to the end-users, such as lower coating cost, improved engineering performance, and increased component life. Thermal spray equipment are an integral part of every step in the thermal spray coating process and can be primarily segmented into thermal spray coating systems, dust collection equipment, spray guns and nozzles, feeder equipment, spare parts, noise-reducing enclosures, and others.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
