Abstracts

Triazolam is a central nervous system (CNS) depressant tranquilizer in the triazolobenzodiazepine class. It possesses pharmacological properties similar to those of other benzodiazepines, but it is generally only used as a sedative to treat severe insomnia. In addition to the hypnotic properties, triazolam's amnesic, anxiolytic, sedative, anticonvulsant, and muscle relaxant properties are pronounced, as well. Due to its short half-life, triazolam is not effective for patients who experience frequent awakenings or early waking.
