This report focus on Underwater Wireless Communication (UWC).

Underwater wireless communication network provides support and differentiated services for applications such as real-time monitoring, surveillance, communication tools for UAV and weather forecasting. With the increase in off-shore oil & gas industry, monitoring pollution in water environment, collection of data from the bottom of the sea, detection of new objects, and transmission of data between the ships have become crucial and require proper communication.

Over the past two decades, heavy cables are being used to establish a high-speed communication channel between the remote source and the surface. This has got many shortcomings which include cost and durability. To overcome these problems, the necessity of underwater wireless communication is proving vital.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Underwater Wireless Communication (UWC) market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.
