Abstracts

VFD cables are designed to reliably carry power for variable frequency drive systems. A variable frequency drive (VFD) is a type of controller that varies the frequency of the signal and voltage to control motor speed. Other common names for VFD include variable speed drive, adjustable speed drive, constant torque drive, inverter drive, and pulse width modulation (PWM) drive. VFD systems characteristically create a significant amount of electrical noise in the form of voltage spikes, reflected waves, charging currents, common-mode voltage, and RFI/EMI interference. This leads to voltages that are two to three times the source voltage. In the case of a non-VFD cable, this could result in insulation breakdown and cable failure. Non-VFD cable also allows common-mode (or stray) voltage to find its way through the motor and equipment grounds, which causes motor and equipment failure. VFD cable significantly reduces the risk associated with these issues.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Variable Frequency Drive (VFD) Cables market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
