## Abstracts

Vein Scanner Biometrics is a biomedical device which uses near infrared light to illuminate subcutaneous veins on skin surface. These devices are beneficial in case where health problems create difficulties in correct vein identification particularly in neonates with their extremely small and fragile veins and arteries, elderly patients, overweight patients and for rapid access in emergency situations.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
