## Abstracts

The prevalence of internal injuries and other diseases, including cancers in abdominal blood, cysts and companion animals (such as cats, dogs, horses) and livestock (such as cattle, pigs, etc.) , and the increased demand for diagnoses of those diseases are expected to drive the market growth. Ultrasound machines can help doctors detect tumors in certain internal regions of the body that are not well seen on x-rays. In many cases, veterinarians use ultrasound to guide the needle during a biopsy. Ultrasound equipment is widely used because it is a risk-free and painless way to look at an animal's internal organs.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Veterinary Ultrasound Devices market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
