## Abstracts

Vibrating Blade Microtome refers to vibrating blade microtome, it is a type of Microtome, it does not fracture cell membranes (freezing frequently does), cytosol remains in cells; stains are sharper, no cytosol in the extracellular tissue. Better for HRP, etc.; can keep cells living. Tissue may be oxygenated under media while cutting; quick setup, glue tissue to platform; no encapsulation needed.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Vibrating Blade Microtome market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
