## Abstracts

Locates visual faults including tight bends, breaks and bad connectors; Accelerates end-to-end fiber checks; Easily verifies polarity and identifies fibers. A visual fault locator (VFI / VFL) is a visible red laser designed to inject visible light energy into a fiber. Sharp bends, breaks, faulty connectors and other faults will “leak” red light allowing technicians to visually spot the defects.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
