Abstracts

A Web Security Gateway is a type of security solution that prevents unsecured traffic from entering an internal network of an organization. It is used by enterprises to protect their employees/users from accessing and being infected by malicious Web traffic, websites and virus/malware.

Web Security Gateways were generally appliance-based security solutions to prevent advanced threats, block unauthorized access to systems or websites, stop malware, and monitor real-time activity across websites accessed by users within the institution. Software and cloud-based platforms now perform this function as well.
