Abstracts

A well logging tool is a device used to prepare a production log. These tools help to analyze the performance of dynamic wells and determine the contribution of each region throughout the production process. These tools also help to distribute hydrocarbon production by region. Any failure can be analyzed by looking at production records, including leaks and crossflows in oil and gas production wells. Logging tools can also be used to monitor results while logging. Most of the logging tools used are modular and can be used in conjunction with a sensor array to record production data. These tools provide real-time data during production and generate logs at continuous intervals.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
