Abstracts

Wound and skin infection treatment is of extreme importance as they are potent to complicate morbidity and cause anxiety which subsequently leads to patient discomfort and ultimately death. In order to treat a wound infection, a physician in common carries out advance wound treatment procedure using hydrogels, alginates, foam dressings, collagen and other wound care products. As advanced wound treatment provides effective and efficient solution by allowing fast healing of wounds, thus it is most commonly preferred over traditional treatment methods. Surgical wounds are further referred to as surgical site infection (SSI) by the US Centre for Disease Control and Prevention (CDC). About 77% of the deaths of surgical patients were related to surgical wound infection.
