## Abstracts

Zero friction coating is a kind of new functional coating with a special function, which has good wear resistance. For example, wear-resistant paint is coated on glass and lenses so they don't get scratched. In the mechanical industry, the wear resistance, hardness and service life of the mechanical equipment can be improved by coating the metal surface of the key parts of the machine with wear-resistant functional coating technology.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
