Abstracts

Phenanthroline is an organic heterocyclic compound and a chelating agent with high affinity towards metal ions. The chemical is generally prepared by two consecutive sequential Skraup reactions of glycerol with o-phenylenediamine and an oxidizing agent such as traditional aqueous arsenic acid or nitrobenzene. Sulfuric acid is used as a catalyst in this reaction. After dehydration reaction acrolein is produced from glycerol and goes into further cyclization followed by reaction with amine to get condensed. 1, 10-phenanthroline anhydrous is majorly used as a chelating agent in various industries. It is also largely used in co-ordination chemistry as ligand (a bonding molecule which helps a central metal atom to form a co-ordination complex by binding). 1, 10-phenanthroline is soluble in water it is also soluble in organic solvents. The chemical is non-toxic in nature.

According to QYResearch's new survey, global 1, 10-Phenanthroline Anhydrous market is projected to reach US\$ 308.1 million in 2029, increasing from US\$ 215 million in 2022, with the CAGR of 5.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole 1, 10-Phenanthroline Anhydrous market research.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
