Abstracts

1,2-Diphenylethane (CAS 103-29-7) is a white needle-like or small flaky crystal with a molecular formula of $C_{14}H_{14}$. It is an important organic synthesis intermediate. It is used as an impregnant for power containers, as a dye solvent for carbonless copy paper, and also as a plasticizer and high-temperature heating medium. The sulfonated product can be used as an excellent leather tanning agent; the dehydrogenated product is an important raw material for the production of fluorescent brighteners and dyes.

According to QYResearch's new survey, global 1,2-Diphenylethane market is projected to reach US\$ 16 million in 2029, increasing from US\$ 11 million in 2022, with the CAGR of 4.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole 1,2-Diphenylethane market research.

1,2-Diphenylethane is an organic compound widely used in chemical synthesis and materials industries. The market demand for it is steadily growing, especially in the field of organic synthesis, where it plays a crucial role in the synthesis of high-value organic compounds. Its specific uses in areas such as pharmaceuticals, coatings, dyes, and high-performance materials make it a vital raw material in many industrial processes. With the continuous emergence of new materials and applications, the market outlook for 1,2-diphenylethane is promising. It will continue to play a key role in the chemical and materials industry, expanding its application areas through technological innovation.
