Abstracts

2,4,6-Trimethylaniline (CAS 88-05-1) is a light yellow oily liquid with a molecular formula of $C_9H_{13}N$. It is an intermediate widely used in dyes, pesticides and other industries. The raw material for its synthesis is mesitylene, which exists in petroleum. In the synthesis process, the nitration reaction of mesitylene is the most important, which is directly related to the production cost and product quality.

According to QYResearch's new survey, global 2,4,6-Trimethylaniline market is projected to reach US\$ 31 million in 2029, increasing from US\$ 24 million in 2022, with the CAGR of 3.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole 2,4,6-Trimethylaniline market research.

2,4,6-Trimethylaniline is a significant organic chemical raw material extensively utilized in sectors such as dyes and pharmaceuticals. The current market demand is steady with a gradual expansion of its scale. With an increased emphasis on environmental sustainability, the future development of 2,4,6-Trimethylaniline lies in its substantial potential for applications in low environmental impact domains, thus offering the possibility of further market share expansion.
