## Abstracts

3D printing medical device software solutions are used to produce medical devices with the help of additive manufacturing. In 3D printing, three-dimensional medical devices are created by adding successive layers of raw materials. Medical devices are produced from a digital 3-D file like Magnetic Resonance Image (MRI) or a Computer-Aided Design (CAD). 3D printing solution is flexible, and it allows designers to make changes without the need for any additional tools. Manufacturers create medical devices matched to a patient's anatomy. The software used in 3D printing medical devices performs several tasks such as printing, designing, analyzing, visualization, planning, and simulation.

According to QYResearch's new survey, global 3D Printing Medical Device Software market is projected to reach US\$ 2822.5 million in 2029, increasing from US\$ 1635 million in 2022, with the CAGR of 8.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole 3D Printing Medical Device Software market research.

3D printing, also known as additive manufacturing, is a manufacturing method based on a digital model file, using powdered metals, plastics and other materials to lay out the print layer by layer, and finally form a three-dimensional object. Currently, it has been gradually applied in industrial design, aerospace, construction, medical and other fields to print models, parts and even final products. According to our research, the global 3D printing market size is about \$15.3 billion in 2022, with the highest share coming from 3D printing services. The industry that uses 3D printing the most is the automotive industry, which is a distant second, followed by the consumer/electronics sector and aerospace. The current global 3D printing head players are mainly concentrated in the

US.
