Abstracts

3DS authentication is a measure to prevent fraud and can be used as an additional layer of security when making card payments. The name refers to the 'three domains' which interact using the protocol: the merchant/acquirer domain, the issuer domain, and the interoperability domain.

According to QYResearch’s new survey, global 3DS Authentication market is projected to reach US$ 15980 million in 2029, increasing from US$ 4024 million in 2022, with the CAGR of 22.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole 3DS Authentication market research.

E-commerce and m-commerce sales around the world are increasing as a result of the surge in smartphone sales and internet penetration. There has been a considerable increase in online fraud as online shopping portals have grown in popularity and online payment methods are more widely accessible. This factor is driving the adoption of 3D authentication technology. In addition, the global 3D secure authentication market is primarily driven by the increasing usage of 3D secure technology to prevent card misuse and payment loss, as well as to improve security against fraud loss. Customer satisfaction increases when 3D secure authentication is used.

Report Scope

This report, based on historical analysis (2018-2022) and forecast calculation (2023-2029), aims to help readers to get a comprehensive understanding of global 3DS Authentication market with multiple angles, which provides sufficient supports to
