## Abstracts

Acellular dermal matrix is a biologically derived product, which is devoid of cells. The main components of acellular dermal matrix include collagen and elastic fibers. It has applications in plastic surgery, general surgery, breast reconstruction, cosmetic surgery, wound healing, and others. The matrix is derived from different sources such as human, porcine, bovine, and others.

According to QYResearch's new survey, global Acellular Dermal Matrices market is projected to reach US\$ 1759.6 million in 2029, increasing from US\$ 1036 million in 2022, with the CAGR of 7.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Acellular Dermal Matrices market research.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs.
