Abstracts

Masterbatch can prevent degradation due to heat and shear during processing as well as UV light and oxidation in the end-use environment. They can limit flammability to comply with key regulations and they can reduce product weight and resin consumption, prevent the build-up of static electricity, or make plastic surfaces easier to print or laser etch.

Masterbatch is manufactured using carbon black, carrier resin and dispersant as the raw materials. There are five types of products in this report. (White Masterbatch, Black Masterbatch, Color Masterbatch, Additive Masterbatch, Plastic Filler Masterbatch) Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
