## Abstracts

Advanced antenna systems (AAS) is the general term used to describe antenna systems utilizing techniques aiming at improving performance and spectral efficiency of radiocommunication transceivers taking advantage of antenna array theory and practice.

According to QYResearch's new survey, global Advanced Antenna System market is projected to reach US\$ 1476.5 million in 2029, increasing from US\$ 836 million in 2022, with the CAGR of 8.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Advanced Antenna System market research.

With the continuous growth in demand for wireless connectivity terminals such as smartphones, unlimited communication is being used more and more frequently, driving significant growth in the size of the RF market. 5G networks deal with an increase in frequency bands, the RF front-end is becoming more and more complex, and the use of modular RF design can better deal with interference, significantly reduce the PCB area of the RF module, shorten the terminal RF design cycle, and gain more and more terminal manufacturers. Recognized by more and more terminal manufacturers. Broadcom, Skyworks, Qorvo, Murata, Qualcomm and other five RF giants basically monopolize the middle and high-end RF market. Qualcomm through the 'baseband + RF' one-stop service strategy, in the early stage of 5G to take the lead. 5G need to deal with higher frequency RF signals, high-frequency filter design has become a key ability, Broadcom Fbar high-frequency filter capabilities leading, in-depth binding Apple, Samsung customers. Murata benefited from the trade friction between China and the U.S., and introduced more new products in Huawei. Skyworks/Qorvo's dominant

position in the base station end is solid, while the cell phone market share is squeezed by competitors.
