This report studies the global Aerospace Plastic Flame Retardant market status and forecast, categorizes the global Aerospace Plastic Flame Retardant market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Flame retardants are a class of auxiliaries that inhibit the combustibility of polymers. They are mostly compounds of Group V, VII and III elements of the Periodic Table of the Elements; in particular, compounds of phosphorus, bromine, chlorine, gallium and aluminum. There are two types of flame retardants, additive and reactive. Additive flame retardants are mainly phosphate esters and halogenated phosphates, halogenated hydrocarbons, antimony oxides, and aluminum hydroxides. The advantages are easy to use and adaptable. However, due to the added amount of 10% to 30%, often affect the performance of plastics. Reactive flame retardants are actually monomers containing flame-retardant elements, so they have little effect on plastic properties. Common reactive flame retardants such as halogenated anhydrides for polyesters, tetrabromobisphenol A for epoxy resins, and phosphorus-containing polyols for polyurethanes.

The aviation industry is growing on account of new trade routes, escalating income levels, and changing lifestyles. This is fueling demand for plastic flame retardants. However, fluctuating prices of key raw materials, such as phosphorous, nitrogen, and aluminum, could threaten industry growth.

Growing aviation sector primarily in North America, Europe, Asia Pacific is expected to stimulate market growth over the following years. Mounting demand for the products over the forecast period as they are preferred over other conventional material options on account of their properties including creep strength, glass transition & melting

temperature, surface resistance, specific volume resistivity and dielectric strength will create immense market potential.

The global Aerospace Plastic Flame Retardant market is valued at 1790 million US\$ in 2017 and will reach 2060 million US\$ by the end of 2025, growing at a CAGR of 2.0% during 2018-2025.
