## Abstracts

This report studies the global AFM Probe market status and forecast, categorizes the global AFM Probe market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Atomic-force microscopy (AFM) or scanning-force microscopy (SFM) is a type of scanning probe microscopy (SPM), with demonstrated resolution on the order of fractions of a nanometer, more than 1000 times better than the optical diffraction limit. The information is gathered by 'feeling' or 'touching' the surface with a mechanical probe. An AFM probe has a sharp tip on the free-swinging end of a cantilever that is protruding from a holder. The dimensions of the cantilever are in the scale of micrometers. The radius of the tip is usually on the scale of a few nanometers to a few tens of nanometers.

The AFM probes market is an important part of the overall AFM market, and is very competitive. Probes range greatly in price, properties and coatings.

Significant competitive factors include technical capability and differentiation (performance, range of features, reliability), productivity and cost-effectiveness.

The global AFM Probe market is valued at 170 million US\$ in 2017 and will reach 280 million US\$ by the end of 2025, growing at a CAGR of 7.5% during 2018-2025.
