Air Ambulance is a comprehensive term covering the use of air transportation, airplane or helicopter, to move patients to and from healthcare facilities and accident scenes. Personnel provide comprehensive prehospital and emergency and critical care to all types of patients during aeromedical evacuation or rescue operations aboard helicopter and propeller aircraft or jet aircraft.

Air ambulance services are advanced and sophisticated medical services extended through the use of use of air transportation, airplane, or helicopters. They are the most efficient mode of shifting critical patients to hospitals as they consume much less travel time. Air ambulances have onboard medical treatment facilities and trained medical crew to treat patients in an emergency until they reach the hospital. These services are effective in serving people in war-torn areas and those affected by natural disasters. They also assist in the event of an outbreak of epidemics.

A trend helping to boost market growth is the increased breadth of insurance coverage. Improving reimbursement methods, either by the government or health insurance companies in developing countries like China and India for emergency ambulance services, will propel the overall market potential for the air ambulance market.

A key growth driver is the rise in the number of service providers. Air ambulance transport has been gaining considerable recognition in the western regions and has started to witness an influx in developing markets as well. India has been a key country and has seen significant growth for air ambulance services. The increase in service providers such as Falck, EMSOS, Saras Ambulance, Air Ambulance World, and Wheels India has witnessed a high market potential in India.

The global Air Ambulance market is valued at 7030 million US\$ in 2017 and will reach 10400 million US\$ by the end of 2025, growing at a CAGR of 5.0% during 2018-2025. The major players covered in this report
